Your link between drones and industry

- Construction:
 - Pre-build inspections
 - Change management
 - Volumetrics
- Agriculture:
 - Crop health inspection
 - Yield analysis
 - Farm management

BOTLINK SYSTEM FOR UAS WORKFLOWS

Botlink software enabling seamless use of off-the-shelf hardware from DJI and other manufacturers

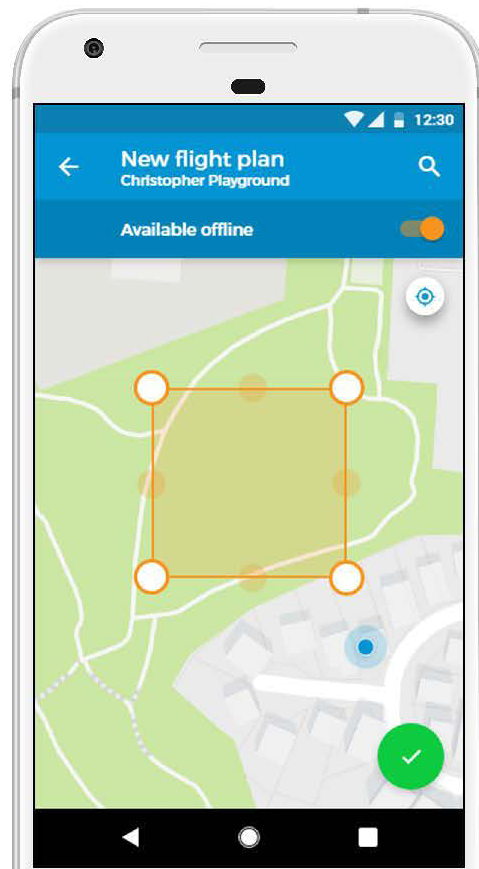

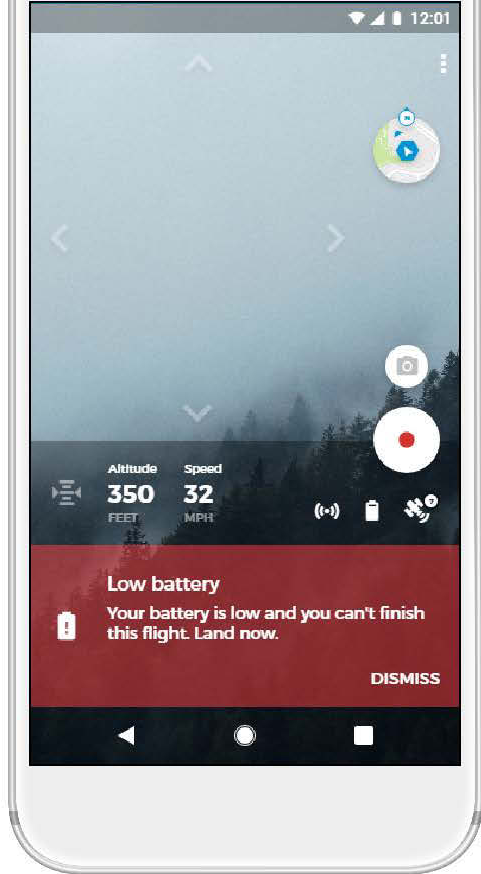

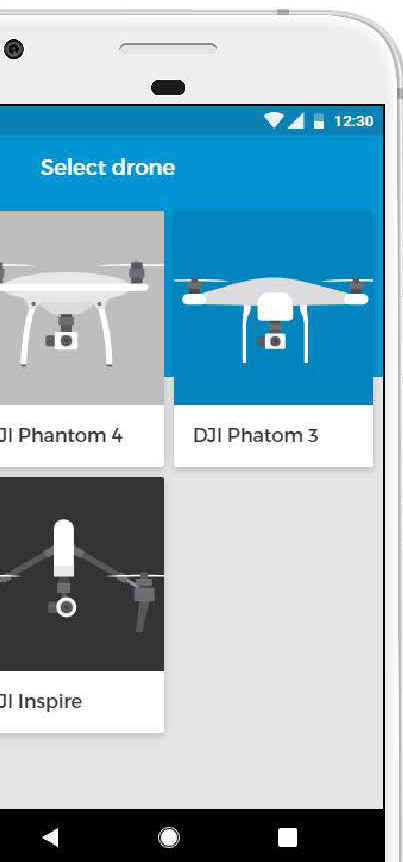

Video and still imagery

- EO
- IR(thermal)
- NDVI
- Multispectral

Seamless delivery of photo and other data to industry applications using a secure cloud with encryption and authentication

Rapidly expanding list of partners for data delivery

BOTLINK APP

Mission planning

Surveys

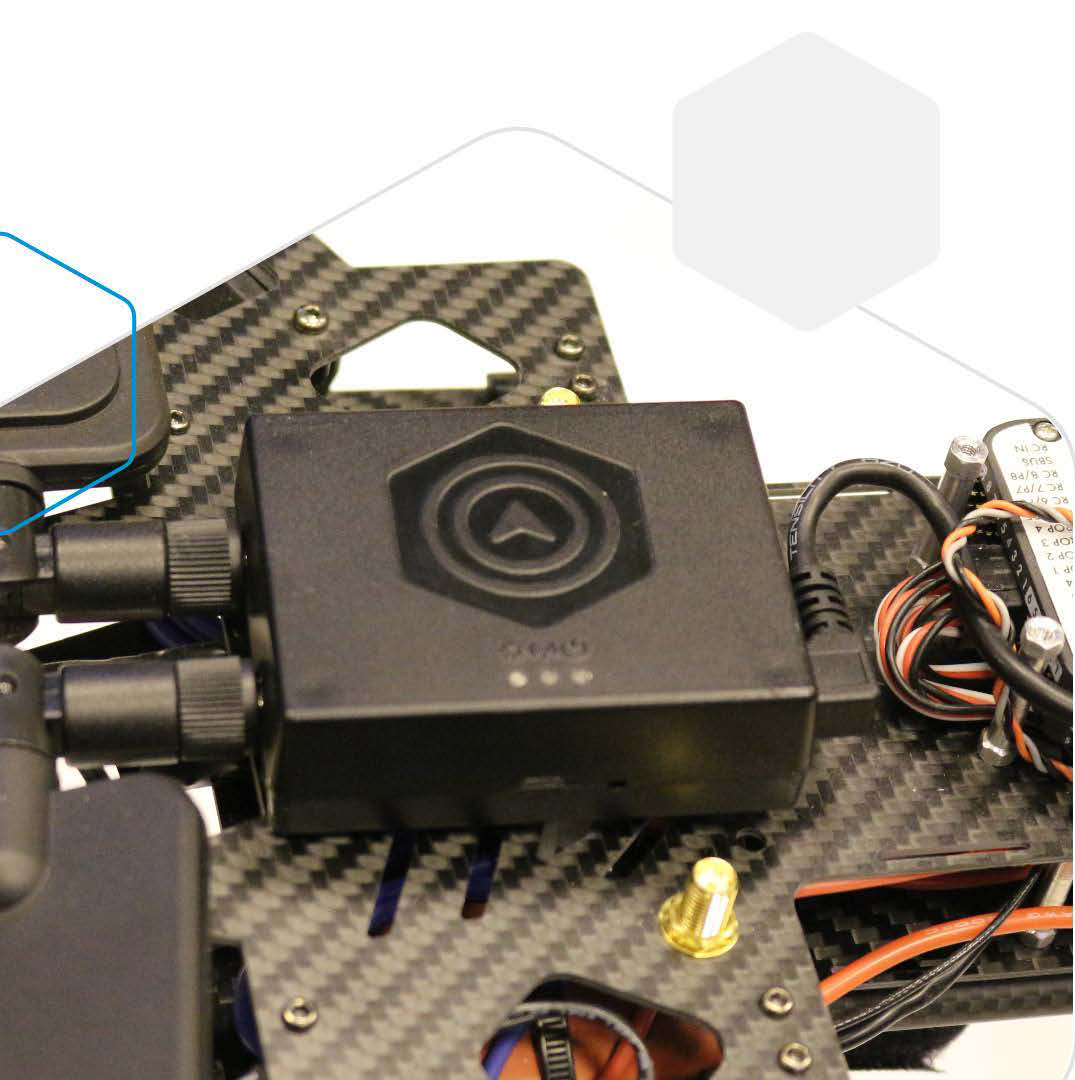

Jobsite monitoring

Aerial photography

Automated drone control

Airspace alerts, traffic advisories
and weather overlays

Safety and regulation
compliance

BOTLINK XRD™

A cellular device that connects
drones to the cloud

Real-time data delivery

Beyond line of sight operation

A misty, atmospheric landscape of a forested mountain range. The scene is dominated by dark, dense evergreen trees, with a thick layer of white mist or fog partially obscuring the lower slopes and valleys. The sky is a pale, overcast blue-grey. Overlaid on the image is the word "FUTURE" in a large, bold, white, sans-serif font. Three white diagonal lines are also present: one on the left side, and two parallel lines on the right side, all pointing towards the center of the image.

FUTURE
